Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: Claims 1-25 have been found to be allowable since while the prior art teaches an image processing apparatus comprising an exposure unit for forming a latent image on a photosensitive material, a developing unit for developing the latent image, a measuring unit for measuring the density information of the photosensitive material developed by the developing unit and a control section for correction for a density of the photosensitive material in accordance with a predetermined density and the measured density information via controlling the at least one of the exposure unit and the developing unit. But the prior art either alone or in combination neither discloses nor make obvious the combination of an image processing apparatus and a corresponding method for adjusting a density of a diagnostic image formed on a film, or an image processing method for processing a diagnostic image, or a corresponding program for making a computer conduct an

image processing method, where a calibration section is provided for creating a lookup table for relating the diagnostic image data and amount of exposure so as to reproduce a density specified by the diagnostic image data, based on the test exposure data and a measured density of the developed image, along with a compensation section and a correction section having specific functions, and satisfying conditions, as recited in the instant claims of the present invention.

Prior Art Made of Record

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
